DerScanner

Consulting & Managed Security Service Providers

# Full-cycle application security testing solution for audit, advisory and MSSP teams to deliver secure code review, compliance and vendor assessment services.

Large security, audit and consulting providers, including MSSPs, deliver a broad range of services: from application security assessments to building a secure SDLC and DevSecOps programmes, product and vendor security reviews and compliance or regulatory projects.

DerScanner serves as the technical engine for these services: it scans source code, binaries and dependencies in 43 programming languages, maps results to recognised standards and generates structured white-label reports that can be issued under your brand – from your infrastructure or on client premises.

## Who is this for

### Application security and cyber risk teams

In global and regional consulting firms (e.g E&Y, Deloitte, KPMG, BDO, etc.)

### Cybersecurity and risk advisory teams

Providing application security assessments and advisory services

### Managed Security Service Providers

Offering code review, DevSecOps and compliance services

## Service scenarios

Use Case 1

### Application security assessments & secure SDLC projects

Use DerScanner as the main engine for application security assessments across web, mobile and legacy systems:

- **Run SAST, DAST, MAST, SCA and Binary Analysis** within your existing methodology, from design reviews to penetration testing.
- **Integrate scanning into CI/CD pipelines** when you build or modernise secure SDLC and DevSecOps for clients.
- **Provide clear, prioritised findings** and trend data for workshops, remediation planning and executive reporting.

Use Case 2

### Branded secure code review & code quality services

Launch or scale services where the deliverable is a detailed view of code quality and security:

- **Perform code reviews** backed by automated analysis of codebases and open-source components.
- **Generate custom branded reports** on your letterhead and templates, combining DerScanner findings with your narrative and recommendations.
- **Offer reports as standalone engagements** or as a module within broader technology, product security or transformation projects.

Use Case 3

### Vendor, third-party and team effectiveness assessment

Support third-party risk management, product security and sourcing decisions with hard technical data:

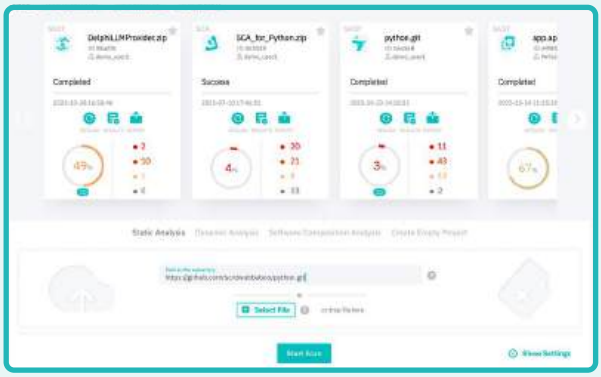
- **Apply the same ruleset to code** produced by internal teams and external suppliers to benchmark security posture.
- **Scan vendor-developed applications** and packages as part of due diligence, third-party risk, or product security assessments.
- **Use results to inform** SLAs, remediation plans and capability-building programmes for client teams and vendors.

DerScanner

Consulting & Managed Security Service Providers

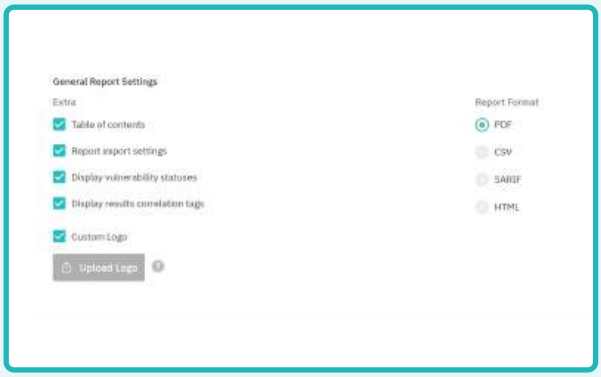
### Easy to work with

Unified UI and reporting across SAST, DAST, MAST, SCA and Binary Analysis, to provide security analysts and consultants with quick adoption of the tool without friction.



### White-label reporting

Apply your organisation's letterhead, logo and report templates so outputs look like native deliverables; export results for ingestion into internal reporting systems or client portals.



### Project and multi-client use

License DerScanner for use across multiple engagements and client environments, including consulting firm cases maintaining a pool of licences to allocate to client on-premise installations.

### Flexible deployment

Run DerScanner in your own infrastructure or deploy it on client premises when policies require on-site scanning and data residency control. Cloud-free, air-gapped scenarios are supported.

DerScanner is a MITRE certified and NIST recommended solution.

With over a decade of expertise in application security, DerScanner provides powerful analysis capabilities in an easy-to-start setup.
